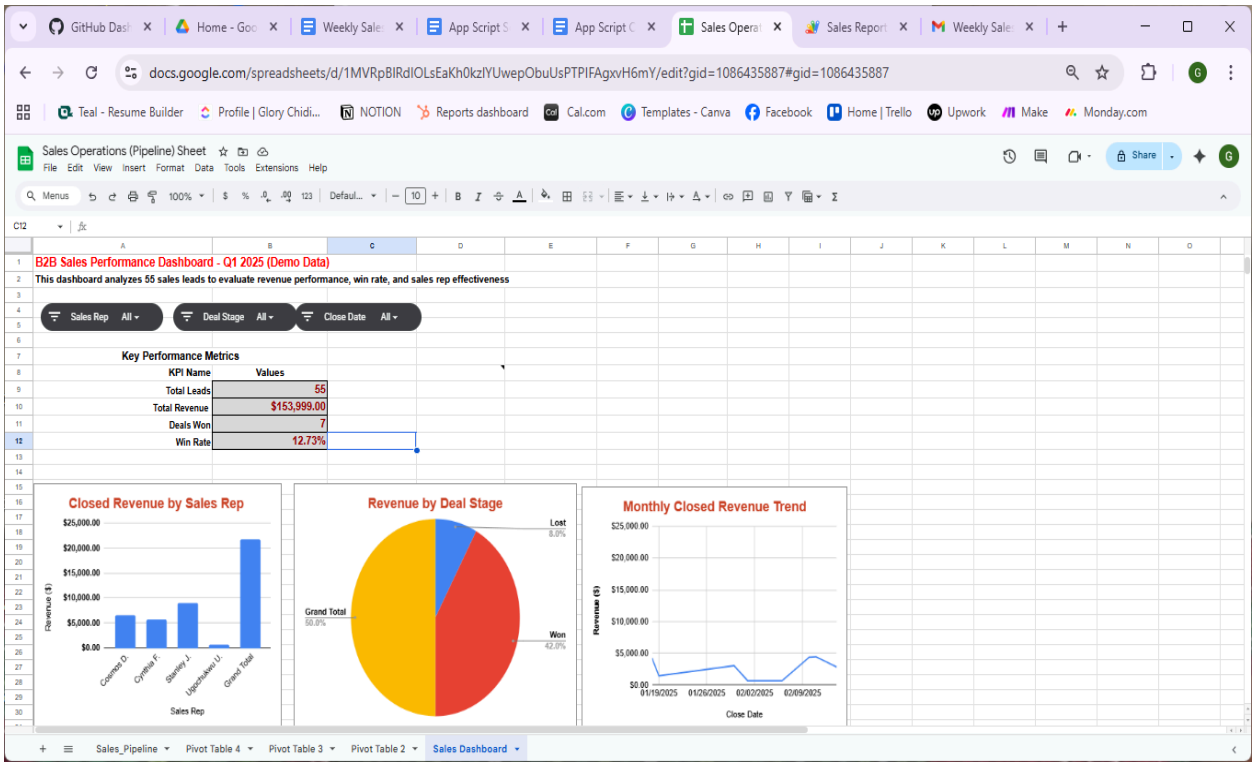
AUTOMATED WEEKLY SALES REPORT (APP SCRIPT VERSION)

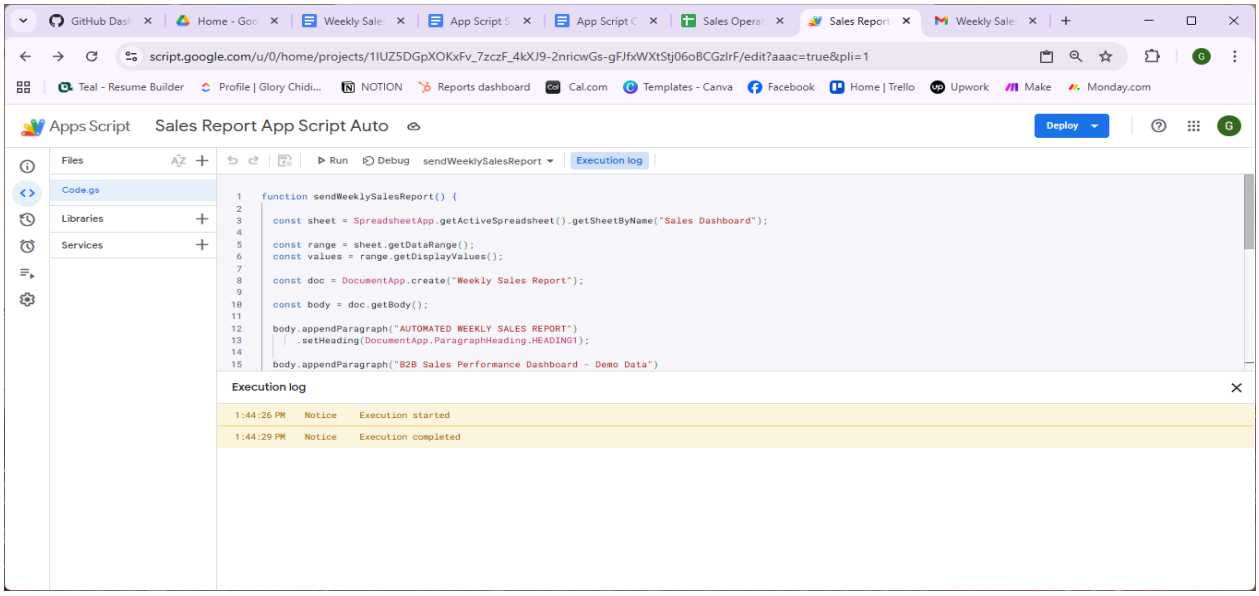
Sales Performance Dashboard Data Source

Description: This screenshot displays the structured sales dashboard dataset used as the source for automated report generation. The dashboard contains key business performance metrics including total leads, revenue, deals won, and win rate.



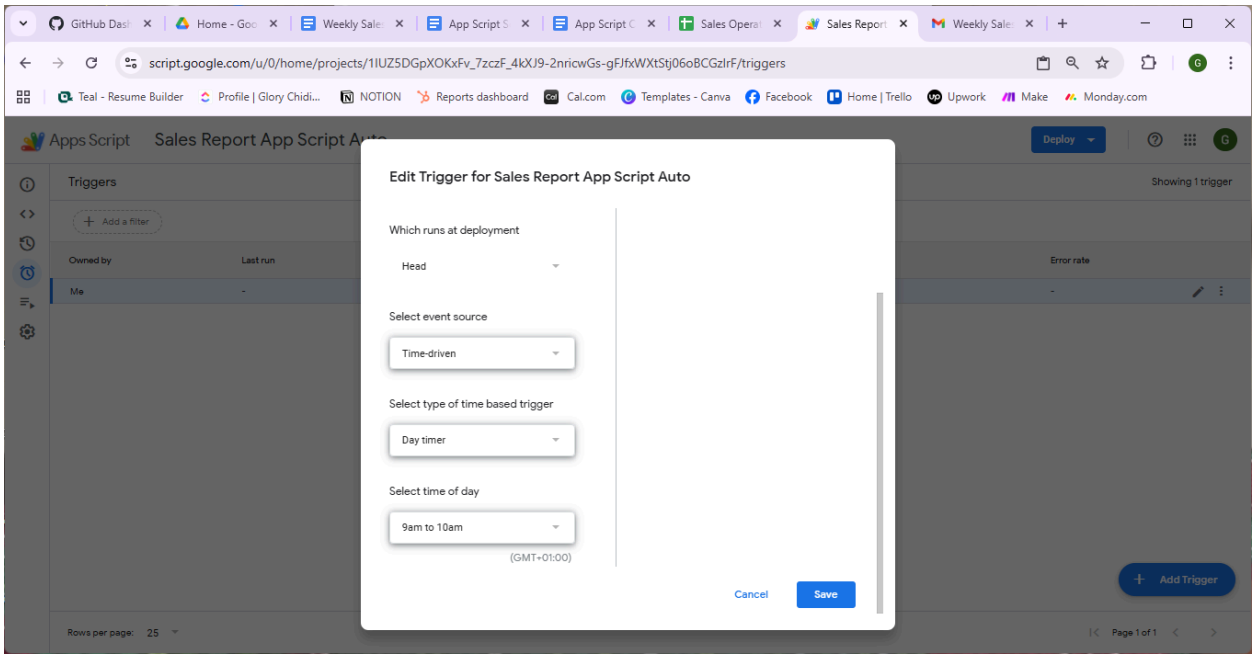
Automated Report App Script Environment and Code Implementation

Description: This shows the Google Apps Script editor where the automation logic was implemented using JavaScript (Code generated by Chatgpt). The Script pulls data from the Sales Dashboard sheet, creates a Google Docs report via automated email delivery.



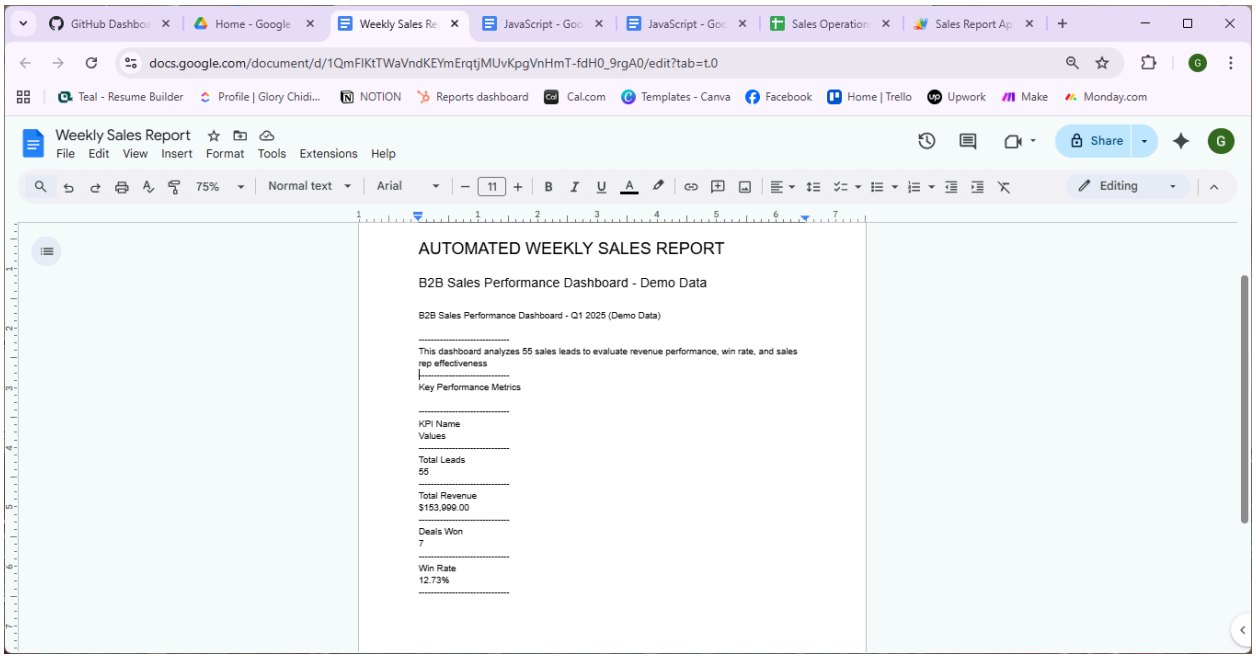
Time-Driven Trigger Setup

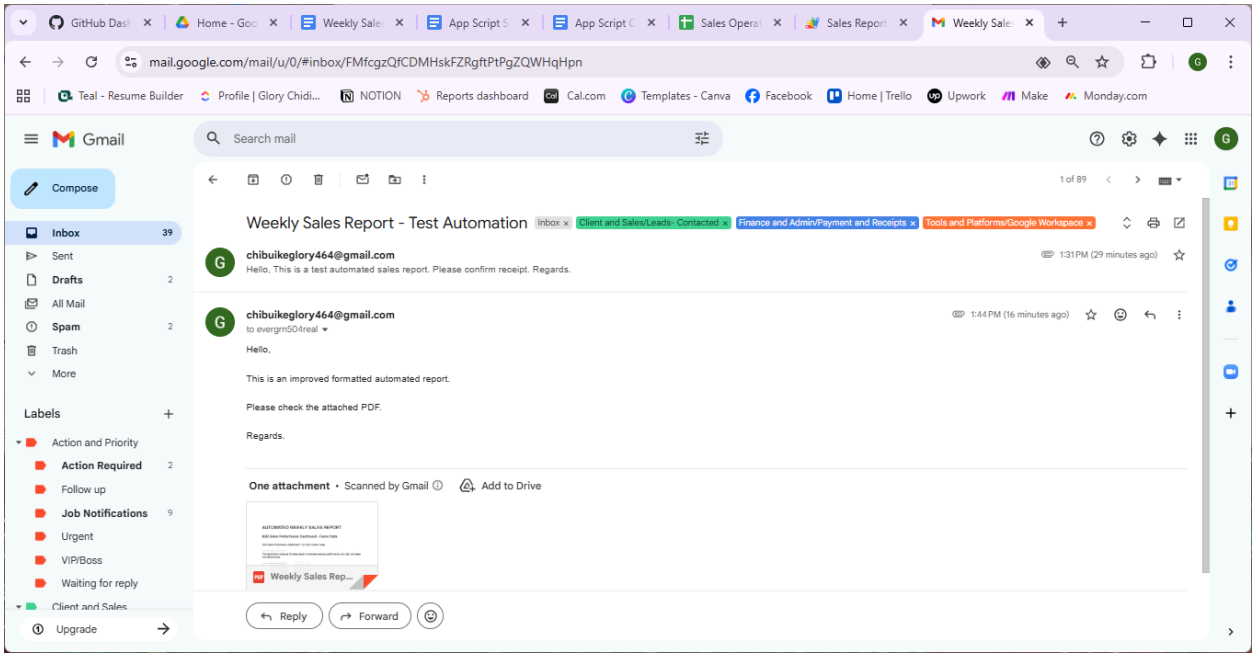
Description: This screenshot shows the configuration of the time-based trigger used to schedule automatic execution of the report generation function eerie Monday at 9am.



Automated Sales Report stored in Google Drive

Description: This demonstrates successful execution of the automation workflow where the generated weekly sales report is saved in Google Drive as a PDF file.



Automated Report Email Notification


Description: This shows the automated email containing the weekly sales report attachment delivered to the configured recipient email address.
